

Surgery fee information

Surgery Payment

- 1) We accept major credit cards, cashier's check, and cash as valid forms of payment.
- 2) When you schedule the surgery, we require a down payment of fifty percent (50%) of the surgery fee. The other fifty percent (50%) must be paid in full within 2 weeks before surgery date. When your scheduled surgery date is within 2 weeks, you will need to pay the full amount. (100%).

Surgery Cancellation

- 1) Please decide carefully when booking your surgery. Once deposit is received it is nonrefundable. You can use this as credit for other services within 1 year.
- 2) If the patient schedules multiple surgical procedures on the same day, the doctor's original fee will be reduced by a discount. In the case of a doctor-initiated mutual agreement to cancel one of the procedures on the day of surgery, the patient will now be charged the original fee for the procedures done. The patient will get a refund of whatever excess is left over after the costs of the doctor's original fee has been paid off.

Revision Surgery Procedures & Payments

- 1) Dr. Choi always uses his best efforts to produce satisfactory surgery results with little to no complications; however, surgeries do not always end with perfect results due to patients' differing lifestyles, genetic hereditary factors and skin conditions, etc. When surgery complications arise and corrections are needed, we will not cover any of the costs for these restorative surgeries. We will also not refund any of the initial surgery fees in these situations and the patient will not ask for refund.
- 2) During the surgery recovery period, visitations to other medical specialists such as ophthalmologists, internists, psychologists, dermatologists, neurologists, etc., in order to receive related treatments may be necessary. In this case, we will not pay any of the fees and costs of these treatments and visits.
- 3) If there is a case of internal bleeding (hematoma) occurring immediately after the surgery or up to a week later and Dr. Choi agrees that a second surgery is necessary, said second surgery will be performed at no additional cost to the patient. However, the patient must still pay the costs of prescribed medicine.
- 4) When corrective surgery is necessary within 1 year from initial surgery, the patient must pay operating room fee, material fee and anesthesiologist fee and the total fee will be determined based on each case. If corrective surgery is needed after 1 year from initial surgery, the patient needs to pay the full current fees.

I have read and understood the financial policies, the surgery revision policies and authorization for disclosure of information. I confirm my understanding of the above by signing below.
